*Stevia* is a sweet herb native to Paraguay, which has been used by Guarani Indians for centuries as a natural sweetener. The dried leaves of *Stevia* are about 40 times sweeter than sugar. It has no negative side effects and contains lots of health benefits/advantages. Unfortunately the European law disapproves the sale of *Stevia* as food or food ingredient. The different types of *Stevia* however are for sale in Europe as a skincare product, from which the ingredients are the same...

The design of the *Stevia & Milk-set* is based on laboratory requisites. Through this it refers to the research state in which *Stevia* seems to be unnecessarily stuck for several years now. Next to the milk can, the set contains a special *Stevia* dripper, which makes it possible to dose a fluent *Stevia* concentrate very easy and precise.

With this product Vij5 hopes to give *Stevia* a better reputation and perhaps contribute to make *Stevia* available as approved food supplement on the European market as well.

*The Stevia & Milk set is designed on account of the exposition 'Sugar Show' during the Dutch Design Week 2009.*

### **Stevia & Milk-set**

**dimensions** | height *Stevia*-dripper 13,5cm,  
height milkcan 10cm,  
diameter 6cm or 50 ml.

**material** | borosilicatglass and cork

**price** | 39,95 euro
